

This script cannot import larger files. Why? answer: .forge archive has two block sizes for editing the forge file; I tell you two paths max and min.It's not the same .forge with 2 separate options.You may find .forge with 2 different options.For example, I have a file in .forge with size 4GB.Then you can have two options for him.Maximum 4GB is the file size for editing. Minimum 4GB is the file size for recording. But you can't have two 4GB files. Or you can have two files with a size of 4GB and a minimum size of 2GB.
