Objects Objects are entities, such as layers, linetypes, blocks, and dimensions, that users place in drawings. They can also be added to images and graphs, and converted into block references, but these are generally used to display information, rather than the objects themselves. AutoCAD Activation Code has several types of object available for use. A drawing object is a complete drawing, created with a drawing template. A page object contains one or more blocks on a page. A block is a rectangle or a polygon. A drawing object can have either a standard appearance or a custom appearance. The standard appearance of a drawing object is the default, and has the same appearance on all views. Users can change the appearance of a drawing object in the Properties palette. A custom appearance of a drawing object is a combination of the appearance of the drawing object and the appearance of the drawing template. It is created by the user, and appears on only one view of the drawing. A layer is a two-dimensional subdivision of the page. A layer can contain blocks, which are one-dimensional subdivisions. There are five types of layer: (1) base layer, (2) pattern layer, (3) contour layer, (4) line work layer, and (5) outline layer. There can be any number of layers. Each layer can have a different color, size and style. A layer can also have an optional drawing template. AutoCAD's
