DB-Pilot for AutoCAD is a Windows program which allows one to use an SQLite database within AutoCAD. User interface AutoCAD LT is based on a "drag-and-drop" (or, more accurately, "drag-and-drop-and-check") user interface for 2D drafting. Users can enter data into the drawing canvas by simply dragging a shape or line segment from the drawing area into the desired area. The program automatically creates the paths, lines, text, and blocks which are required to represent the shape. When finished, a user can save the drawing, or export it as a.DWG or.DWF file. The export mechanism allows the user to save the drawing in the native AutoCAD DXF format or in an "as is" format (DXF/DWG/DWF). Because of the popularity of AutoCAD, the user interface is thought to be similar to that of Microsoft Word. Functional areas Drafting AutoCAD provides basic drafting functions, such as the ability to create lines, arcs, and polylines, rotate the image, and view the drawing in a variety of ways. When viewing a 3D drawing, the user is not able to rotate the drawing. A drafting function called Snap is included in the program. With Snap, the user can click in the drawing area and a line, arc, circle, polyline, text, or block appears in the drawing area. There are four levels of snap. Clicking on one of these points initiates the snap function, which allows the user to move, rotate, resize, or create new objects. Snap does not create or destroy objects; it only affects their display. Objects snap into position or adjust when they are moved. If you click on the corner of a shape, the "Extend Line" button appears at the top-right corner of the drawing area. Clicking on this button, causes the line to extend automatically into the next adjacent shape or drawing area. This function cannot be disabled. Users can also move, rotate, and resize 3D objects. Presentation AutoCAD allows users to change the size, color, and opacity of objects. Color styles are an important aspect of AutoCAD's interface. Objects in the drawing area are colorized by using color styles. Different color styles are used for different categories of information, a1d647c40b
