# JavaScript Restrictor (JShelter) Crack + Free License Key Download [Mac/Win]

This extension ensures that the information you share about yourself with web applications running in Mozilla Firefox or Chrome is not shared without your consent and that your personal data will not be used for any purpose other than that you intended it for. It does not block any of the code that the websites you visit actually use. It is instead an extension to the browser that modifies, in real-time, the code generated by the browser itself. This means that it protects you from malicious sites as well. To gain better protection, this extension's filters run on multiple processing threads inside the Firefox browser. This extension is sponsored by Mozilla. Who is using JSSheild: Many popular websites like Gmail, Facebook, Twitter, Netflix, or Google Maps are using JavaScript. This often makes it very easy to track you and gather information about you. Web services use our cookies and the information collected to remember you and show you better content on your website. If you want to block trackers, it is possible. You can do that with the JavaScript content blocker that will add a few extra little bar for you to click on before using any content on the web. This option will only protect you while you browse the web; if you click on a link or share a tweet, this protection will not work. You can make an exception to this rule for an entire website using its own content blocker. For example, you can authorize Facebook, but not Twitter to access your cookies. When the browser blocks a request related to your online activity, you get a red warning bar. Set the protection level for each website to take full control of your privacy by blocking just the JS scripts you want to be displayed. Sites like Google, Facebook and Twitter already support the Content Blocking API. Warning: JSSheild changes website behavior. To get the maximum protection, you should only use websites that are using the JavaScript Content Blocking API. If you prefer the old methods to share information with their websites, you should set the level to 1. How to use JSSheild: JSSheild is a simple but useful little tool that provides a few extra protection on top of the Firefox browser. If you want to modify the website you visit in real-time, you will need this extension. If you prefer to use this extension only to block trackers, you can turn off the website filtering by setting the JS Sheild level to 0. How to use the Content Blocking API:

To modify

# **JavaScript Restrictor (JShelter) Crack+ [Updated-2022]**

# JavaScript Restrictor (JShelter) License Key

**JavaScript Restrictor (JShelter) Description:** When users visit a website, it allows the website to view their activity on the computer, like looking at which website the user was visiting before they visited the site. It allows the website to collect identifying information for the website they were previously visiting. This is the same information the website would already get from the browser. How the website can learn this information: - From cookies, which are temporary files stored in users' browsers. - For some websites, through the use of the website (tracking, etc). **JavaScript Restrictor (JShelter) User Interface Details:** While the website being visited does not have to have any extra code on it, JShelter does not work with websites that use a web server, as they are not directly controllable by JShelter. This will prevent the website from detecting the information it is looking for. **Features:** - Support for Firefox 57 or newer. - Works with the DOM/JavaScript and with web page elements. - No external dependencies. - No need to turn on a feature to use it. - Support for most websites. - No extra pop-up windows. - Free of advertisements. - Easy to use. - A lot of functions to enable you to get the most out of the extension. **How to use JShelter** To use JShelter, right click on the address bar and click the extension icon. This will open up a small popup window to decide your setting for the currently visited website. You can choose the protection level for the website you are visiting at any time. If you decide to enable this feature, you can always later change your mind. Even if you decide to disable it, you can always come back later and make the option active again. After choosing a setting, you will be asked to confirm your decision. This popup window also allows you to change the privacy settings for the browser. In Firefox 57, a new privacy option appeared, named "track protection". You can set the three levels of protection that are available. - "0" - the website does not have any access to the cookies you are using - "1" - the website gets access to your cookies and other information in the browser (cookie, web storage, similar to cookies but persistent, autofill, typed search keywords, etc.) - "2" - the website gets access to all the information

## What's New in the JavaScript Restrictor (JShelter)?

---

## System Requirements:

OS: Windows 8.1 or later  
Windows 8.1 or later  
Processor: Intel Core i5-3210 or AMD Athlon II x4 630 or faster  
Intel Core i5-3210 or AMD Athlon II x4 630 or faster  
Memory: 8 GB RAM  
8 GB RAM  
Graphics: NVIDIA GeForce GTX 760 or AMD Radeon HD 7870 (2 GB VRAM)  
NVIDIA GeForce GTX 760 or AMD Radeon HD 7870 (2 GB VRAM)  
Display: 1280 x 800 minimum resolution  
1280 x 800
