About an hour and a half before the interview started, Levin's producer Matt Dunleavy had shared the audio of Michael Hayden's denial to CNN's Jake Tapper that the CIA under John Brennan had spied on the Trump transition. Levin: So one of the questions that I asked of you is with respect to the CIA and the NSA, with respect to these two agencies, specifically with respect to reporting to the FBI and the failure to report to the FBI, you made this comment, and again, I'll paraphrase. I don't want to misrepresent it. You said that, quote, "I'm making an assumption here. I'm not saying there was one specific readout of this collection." You said, "That it was a lot more general, it was likely a lot more general than that." But I'm just curious if you could tell me what those specific readouts were. Hayden: Jake

---

— there are a couple of answers to this, but the first is that not only did we not read down President Trump’s phone calls, there was no, I knew of no reading of President Trump’s phone calls with President-Elect Trump. The second answer is very simply this: I do not believe that the FBI did in fact receive the information that President Trump, for example, made a phone call to, let’s say, the Egyptian government, and the topic of that call could not be of a transnational terrorist threat, as in, yes, that was read down, but it was not, for example, that he was relating to the Mexican narco-traffickers or the Russian mobsters or Russian organized crime figures or the Taliban about killing a bunch of Americans in Afghanistan, et cetera. That was not read down. That was not happening. Levin: But you would not deny that the CIA was collecting that and had a relationship with the NSA for all those things you just mentioned? Hayden: I will deny that the FBI was given information that could only

Image with no alt text.Q: How to upload files to AWS S3 in Python I am trying to upload files to S3 using this bit of code: `import requests data = { 'acl':'public-read', 'key':KEY, 'success_action_redirect':', 'AWSAccessKeyId':ACCESS_KEY, 'policy':POLICY } response = requests.post(", data = data) print(response.text) with open('s3.jpg', 'rb') as f: headers = f.getheaders() response = requests.put(S3_BUCKET_NAME + 'my_file.txt', headers=headers, files={'file':(file, 'application/octet-stream', open(file, 'rb'))})` I am just getting the "Uploading" status code 500 as the response. Any idea why? A: You need to use multipart data parameter, modify your code as: `import requests data = { 'acl':'public-read', 'key':KEY, 'success_action_redirect':', 'AWSAccessKeyId':ACCESS_KEY, 'policy':POLICY } response = requests.post(", data=data, files={ 'file':('my_file.txt', open 570a42141b`
