An all-in-one text editor that supports UNIX, Mac OS, Windows and Android. Author: Samir Bhavsar.Q: How do I set a statusbar to 0%? I'm using Storyboards. I have created a PagerViewController, but I want to see a status bar at the top showing

how much of the screen is filled with the `PagerViewController`. I've added the code below to this class, but it's having no effect.

```
class MyPagerViewController:
PagerViewController { override func
viewDidLoad() { let percentage =
    UIView(frame:
        UIScreen.main.bounds)
percentage.backgroundColor =
    UIColor.redColor()
percentage.center.y =
    view.bounds.maxY
view.addSubview(percentage) } I
expect the viewcontroller to be visible
and this red bar to appear at the top of
```

my viewController. It's not showing.

Any ideas? A: I have found that `view.frame.height = 0.0` gives the expected result. I found this through trial and error and I couldn't find it in the `ViewController` class

documentation or in `viewDidLoad`. I don't know why, but it works. Steroid

hormones modulate the survival of peripheral neurites and growth cones of the retinotectal projection. The presence of gonadal steroids in the developing avian retina is known to alter the morphology of the retinotectal projection. The mechanism of this effect remains

unknown but we are investigating the possibility that gonadal steroids may modulate the growth and survival of neurites. In this report we show that gonadal steroids regulate the survival and growth of retinal neurites in vitro. Male starlings in the first stage of the breeding cycle exhibit an increased rate of retinal neurite outgrowth in vitro. Retinae obtained from both male and female starlings in the second stage of the breeding cycle had the same rate of neurite growth in vitro, but were otherwise identical morphologically. Testes from male starlings in the third stage of the

breeding cycle exhibit a suppression
in the rate of neurite outgrowth,
whereas ovaries from female starlings
in the same stage of the breeding
cycle have the same rate as ovaries
from female starlings in the second
stage of

What's New in this Version: Version: 1.1.1

Update to version 1.1.1: - Fix for Windows 32-bit system with GCC 3.4.1 - 3401. Modular basic games interpreter, developer, and distribution platform. PSDr is a simple, modular, standalone hardware-accelerated C++2D platformer game development framework. It relies on Lua scripting rather than traditional scripting languages. PSDr is intended to simplify game development by using well-established gaming engines as starting points, avoiding the need for complicated graphics engines and

setting up a whole game engine infrastructure. It's extensible, too, making it very easy to add your own logic into its engine. A working demo shows how to get started with the PSDr toolkit, including how to define a new game type with plugins for setting up items, behaviors, code for basic game entities, level editor, sound, and much more. The PSDr core itself is designed to be very simple, flexible, and modular, allowing developers to adapt the game engine to their needs and reuse all or part of the framework in their games. The future releases of PSDr are

planned to be added-on features to make it a complete platform for 2D game development, including level importing, importable game files and saving, high-resolution sprite management, and a video output tool. In cooperation with Focus Works Ltd (TW), this will be the first time that US and UK developers/publishers/vendors will be able
