Escalera divisoria de un diccionario francés-españolA tale of how and why I made this filmÂ . Trimble Global Navigation Satellite System (GNSS)Â . TRIMBLEGPSATHFINDEROFFICEV53CRACKREQUEST Â· Ubuntu 16.04 Â· Gigabyte GTX 1080 AMD XtionÂ . Just one word of caution: I use the + instead of a space between the words and "-". It doesn't harm anything but it creates a space between the words that may cause your files to look funny if you paste them somewhere. Q: Homologous 2-cells in the category of groupoids I have a question about a generalization of the notion of homologous 2-cells from 2-categories to the more general concept of groupoids. Let G be a groupoid and consider the category of G -sets with G -equivariant maps. This is a groupoid: the 1-cells are the G -equivariant maps, and the 2-cells are just the G -equivariant maps $f: X \rightarrow Y$ such that $y \cdot f = y \cdot g$ for some $y \in Y$ and some $g: X \rightarrow Y$. Consider now the category of G -sets with G -equivariant maps and homomorphisms, that is, the category of groupoids with G -equivariant morphisms. There are two forgetful functors from this category to the category of G -sets: one which forgets the homomorphisms, and one which forgets the G -equivariance, and which also forgets the action. I believe the category of G -sets with G -equivariant maps and homomorphisms is also a groupoid. This can be easily verified by an argument similar to the one given above. In particular, the category of groupoids with G -equivariant homomorphisms is not just an ordinary groupoid, but a homological groupoid. My question is: is there a category of groupoids with G -equivariant homomorphisms which is not a homological groupoid? A: The category of groups with group homomorph
