Predictors of outcome of people who self-injure in regional support services. This study aimed to help clinicians to identify predictors of social outcome of persons who self-injure, from the perspectives of two experienced cases managers from regional support services. Self-injurers referred to one of the authors worked from this case study were asked to complete the self-injuring behaviour assessment schedule (SIBAS; Oades, 1994, 1996), administered by interview by one of the authors to 26 persons at an assessment and then again four months later. An average of 0.5 years had passed between the original assessment and repeat interview. Interviews were audiotaped and carers and service providers were asked to answer a 'Client's Social Outcome' questionnaire, designed for this study, based on evaluation of SIBAS interview data and the previous literature. Responses from carers were compared for predictors of social outcome and related to available data from SIBAS and the results of SIBAS. Overall, SIBAS was rated highly for its reliability and internal consistency and the correlation between patterns on the SIBAS were high. Marital status and the number of years since the first self-injury was strongly and negatively correlated with an increase in social outcome, while family history of self-injury, number of previous self-injuries and self-harming behaviour were positively correlated. A range of potential predictors of outcome can be identified from the SIBAS. Is Quantum Mechanics Over? - nickolai ===== Diederich "At a faster rate than you can likely imagine." I'm no mathematician, but this story appears to be divorced from any idea of what it would take to (actually) solve the "hard problems" of quantum mechanics. For example, an electron is now considered to be a point charge, rather than an extended object. This removes the potential problem of electrons in the vicinity of each other being 'leaking information', as they are now basically the same thing, separated by a narrow tunneling distance rather than a wide tunneling distance. The same distance looks wide or narrow, depending on whether you are talking about a particle (which is assumed to be a point, _at all times_

As usual, President Donald Trump missed the opportunity of a lifetime to help resolve the crisis in Venezuela, where political turmoil, hyperinflation, shortages of food and medicine, and an exodus of immigrants have transformed the once stable nation into a proxy battlefield in the power struggle between the United States and Russia. In a speech from the White House Rose Garden today, Mr. Trump called Nicolás Maduro, the incumbent president and his predecessor, Hugo Chávez, a dictator. The rhetoric was jarring coming from Mr. Trump, a leader who has notoriously low credibility on the rule of law in his own country. Mr. Trump's willingness to foment a coup against an ally in the Western Hemisphere may be understandable, or even rational, but long-standing American foreign policy barred just such an interference, and showed that Washington rejects Mr. Maduro's government even if his predecessor died nine years ago. The president's decision to back the usurpation effort comes at a particularly challenging time for the United States. American influence in Latin America has been on the wane for decades. The region is rapidly losing the trust of its citizens and the prestige of its governments in Washington, and that is creating a domino effect as democratic impulses crumble and spheres of influence competition begins to heat up. On Monday night, Maduro dissolved the country's legislature, Venezuela's highest court, and the country's Senate. The State Department last week said that it would recognize Juan Guaidó, an opposition leader, as interim president; and Mr. Maduro — despite his excessive violence and indiscriminate abuse of the armed forces — lost considerable prestige in Latin America. There are also few Latin American leaders willing to stand with an embattled fellow leader. Brazil, the region's largest country, has no interest in a dictatorship, even one of a country with a large black community. Mexico is wary of dictatorial tendencies. Chile remains traditional American ally. Moscow, meanwhile, is firmly committed to the Maduro government, and more importantly, has seized the chance to increase its long-standing influence throughout
