U.S. military rifles intended for use by law enforcement officers have been used to commit multiple violent murders. Although the firearms in question were bought legally by their owners to protect their homes and property, thousands of these weapons have found their way into the hands of criminal elements. According to the Daily Mail (London), "One man used his legally-owned AK-47 assault rifle to gun down four elderly people outside a bank in Columbia, Tennessee." Also, "A Tennessee woman was shot dead during a domestic dispute with her boyfriend on the same day that a U.S. Marine Corps veteran used his personal handgun to kill two colleagues at a Tennessee college." The report suggests that the reason why such crimes occur is that "most people buying them from private sellers lack any training." It states that there have been no significant legal repercussions for the criminals who have used the military-issued rifles. Law enforcement officials and others have been trying to sound the alarm about the potential danger of these weapons. For instance, one police officer said, "The AK-47 is very portable. Someone could take one out of a trunk or a glove box on the way home and could be on their way in minutes." More than 1,200 legal civilian buyers of the rifles have been verified on the website Army-Navy-Airforce-Marine.org. However, the FBI has been instructed to conduct background checks for any other buyers. Although the U.S. Army has not issued them, it has sold 5.56mm rifles to the U.S. Marine Corps for civilian use. However, none of the rifles have been used to commit crimes. The Army approved the sale in 1998. Although the guns in question were meant for use by law enforcement officers, the Daily Mail notes that they were initially issued to military units. Although the purchase of such military weapons has been legal for years, the FBI is currently conducting background checks on all such buyers and
