Although Photoshop is the most popular software for manipulating images, it is but one of several applications (see Figure 2-4) that are used to manipulate image data. **Figure 2-4:** The process for image processing begins with the capture or the import of images. Image Capture and Import As a photographer, you need to be able to capture and import images quickly and with ease. You also need to be able to manipulate them before you can use them. Photographers use a variety of methods to capture images, but one of the most popular is a digital camera. At the heart of any digital camera is a solid-state image sensor (the part that captures the image). Most cameras also include a CCD or CMOS image sensor, which delivers a higher resolution but lower pixel density. CCD sensors use a process called Charge Coupled Devices (CCD) to transfer and store charges when capturing images. CCD sensors can capture more pixels per inch than CMOS. (CMOS is a type of image sensor.) You can also capture images by using a film-based camera. These cameras have an image cassette, or film holder, on a motionless platform that captures images as the film winds. (Chapter 3 shows you more about different types of cameras.)

**Importing captured images** Importing an image means the process of grabbing the image from a camera, a scanner, or another image-capturing device and placing it in Photoshop. An image can be attached to an email (in the form of a.tiff file), saved to a hard drive, or attached to a printout. You can also place images you have captured on removable optical media on your computer. You can use Photoshop's import feature in the following ways:

- Import from digital cameras:** You can import images from a digital camera connected to your computer. Chapter 10 covers the various ways that your camera can work with your computer.
- Import from optical media:** You can import images you placed on removable optical media, such as a CD or DVD. Chapter 3 describes the different types of optical media you can import.
- Import from scanning devices:** You can import images from an image-scanning device, such as an all-in-one photocopier or printer. After importing the image file into Photoshop, you can then use Photoshop's Document Image feature to crop, size, resize, and touch up the image. Chapter 4 explains how to use the scanner

The most important thing for first time Photoshop users is to learn the essential features of the program. We will take a look at all the Photoshop features that can help you edit high-quality photos and work faster on a daily basis. 21 Essential Photoshop Features Every Photoshopper Should Know Import, Exports, and Web Publishing Substitute the Logo Adjust the Color Create Radials and Curves Add Outer and Inner Details Sharpen and Blur Effects Add Highlight and Shadow Effects Define the Mask Magic Wand Adjust the Size Fade Effects Add a Watermark Speed Dial Effects Data from the Edges Remove Background Change the Blend Mode Smudge Tool Mask Tools Retouch Tools Photo Editing Tools Beautify Brushes Video Editing Tools Image Resizing Tools Final Thoughts Import, Exports, and Web Publishing This one is the most important feature. Photoshop is primarily designed for editing images. If you want to start posting your photos on social media or print them on a professional poster, you need to use the method of exchange. Exports don't work as you expect. If you want to get any photo outside your editing area, you need to export it. This is a temporary way to save a photo that you can send later. With other programs, you can share directly to Facebook and other social media platforms. To export, use the File > Export command. You need to select the type of file you want to export. There are many presets for you, including GIF, JPEG, PNG,

TIFF, PSD, and more. In this example, we will create a JPEG image by exporting a PDF from Adobe Illustrator. Substitute the Logo This is one of the best features of Photoshop. Photoshop Elements allows you to substitute the logo of your company or brand to create free images for social media and brochures or websites. There are many logos on the internet with the Creative Commons License that you can use to replace your own logo. Select the logo you want to replace in the image. At the top of the screen, click on the “Layers” tool (the T). The layers in the layer panel will be visible. Click on the layer that 05a79cecff

The effect of long-term subcutaneous olanzapine and risperidone on biochemical markers of bone turnover in schizophrenia. In this randomized, double-blind study, we assessed the effect of a combined long-term treatment with olanzapine and risperidone on bone turnover and serum levels of insulin-like growth factor-1 (IGF-1) in 18 patients with chronic schizophrenia. The patients received either olanzapine, 5-20 mg/day, or risperidone, 4-16 mg/day, for 26 weeks. In a subset of patients with subnormal baseline values of bone alkaline phosphatase, osteocalcin and IGF-1, bone biopsies were taken to assess bone formation and resorption. We also examined the occurrence of adverse events. The concentrations of bone alkaline phosphatase, osteocalcin and IGF-1 did not differ significantly between the groups. Our results suggest that both olanzapine and risperidone are well tolerated in the long term and do not seem to significantly influence bone turnover or serum levels of IGF-1.

### What's New in the?

Q: Reverse a property list I've been searching around trying to find a function to reverse a property list, which happens to be named 'list'. I found this question. I'm a beginner and don't know how to do this, I have a list of strings. I'm trying to make a function, which when given a variable, add to the variable all the strings. Here is what I have so far: 'list' Over 40% of all antibiotic prescriptions in the UK are issued as 'elective' – meaning they are not used when needed. This means that this potent antibiotic is not being used to treat a bacterial infection when it is actually needed. A report has shown that bacterial resistance can be caused because of unnecessary antibiotics being prescribed to animals. Get them off the farm now... The policy has long been ignored by farmers and their vets. This might not be the most effective way of making our food safer, however, the findings do indicate that antibiotics need to be used in a more targeted way. The W.H.O. is working on a report, which will hopefully advise on how this could be achieved. "If bacteria can't be directly targeted, should we be using antibiotics to treat livestock?" The results Just 41% of the pigs had been slaughtered within two days of the application of antibiotic
