Read on to see which EA Sports game is getting motion capture and why. FIFA 18 HyperMotion Technology (FIFA 18 HM) allows players to run more freely as they can alter both attack and defensive movement paths during the course of the game. They can sprint and change directions at any point while the ball is on the ground, making players active rather than sluggish. Branching paths mean that players can still change direction while receiving a pass or making a tackle but while also maintaining their speed, attack or defense. During the course of the game, players can make 'hard directional changes' that transfer their direction without changing their momentum. FIFA 18 HM is used in the following EA Sports games: FIFA 16 and FIFA 16 Mobile (with 'pass' button) Need for Speed 2015 (with 'air cars' button) Football Manager 2017 and 2018 (with 'pass' button) FIFA 18 HMT (with 'pass' and 'air cars' buttons) FIFA 18 and FIFA 18 HMT (with 'air cars' button only) are both accessible via Touch Controls on the PlayStation 4, Xbox One and the Nintendo Switch Player movement has been the biggest focus when creating the update and the above information has been used to create an enhanced version of player movement seen in FIFA 18. "In FUT, players are too stagnant," said Raphael 'Rafa' Martinez, Senior Producer at EA SPORTS. "Players are no longer able to change their speed and acceleration when on the ball, and they are never able to change direction aggressively while making a tackle or intercepting a pass. "Instead, players often drag the ball and miss, or launch an attack way off target. In FUT, we felt we'd be able to implement true freedom of movement by applying the motion capture data from the 22 footballers who appeared in the FIFA 18 live, motion capture stage." FIFA 18 HMT is the first title that is using full player motion capture on the Switch and, although it was not officially announced, the FIFA 18 announcement video had a strong presence of it. FIFA 18 HM first appeared in FIFA 16 in September 2015 and played a big part of how the game had its most convincing and realistic player movements to date. FIFA 17 was the first FIFA to use it, but many players have been frustrated by how

The biggest addition to the game this year is FIFA Ultimate Team, which is a brand new way to buy and sell players. Pick from one of the FUT Drafts, or the trading market, or create your own player with the Custom Draft. Of course you can still create your own player with the Create a Player feature. Defunct Features Key Features In FIFA 22, EA have provided the game with numerous graphical and gameplay improvements over last year's FIFA 21, including: Adaptive Referee AI — With the introduction of the new AI goalkeeper system, the pressure on referees will be reduced by allowing them to focus on key moments in the game. Players are better able to dictate the pace of matches as well as offering more variety to the position they take up on the pitch. FIFA SBC — When a player steps on the pitch, the crowd's unique chants and songs that are associated with that player begin playing. The SBC supports an expanded number of languages, with 34 playable this year. Zones of Control — Moving players freely in and out of the penalty area has been improved, allowing them to run freely off the ball, dribble past defenders, and even use their trailing foot. Faster Ball Passing and dribbling has been improved to feel more responsive and fluid. Controlling the ball with the right stick has also been greatly improved. Passing — The passing distances have been improved. Passes that would have been considered too long before now fly towards their intended target in a smoother, easier manner. Dribbling — You can now shift weight and power better in the new transfer of the ball and more attacking players have the ability to beat opponents off the dribble. Long Shots — When players shoot from a distance, the ball is much more visible on the back stick, allowing you to more easily judge whether to pass it, shoot it or look for another passing option. Crosses and Overhead — Crosses have more weight and body movement, allowing players to more easily knock them in with their head or chest. Overheads have been given new weight and body movement, allowing players to more easily place them. Through balls and off-balance shots — Defenders can no longer block off-balance shots at goal without provoking a penalty. If you do manage to get it past your opponent, you'll score. Defenders no longer have the option to remain static and block off.
