Photoshop has always been a favorite among graphic designers, web designers and photographers to create, edit and edit images. It is also used for image retouching, graphic design and in many other various applications. It is also one of the most popular graphics editors used, with an estimated 1.5 billion users using it monthly and continues to grow in popularity. The most popular version is Photoshop, which is also Adobe's flagship product. However, Photoshop isn't the only one that has undergone the recent update. The entire suite of Adobe products have been enhanced and modernized. Adobe Photoshop was upgraded to Photoshop CS3 in 2006. The upgrade essentially added several new features, updated existing ones and left many back-end features to the end. It wasn't until May of 2015 that Photoshop was upgraded again, this time to the latest version, Photoshop CS5. However, Adobe has announced the next version, Photoshop CC 2015, would be released next year. How Photoshop Works For most photographers, graphic designers and web designers, Photoshop is a necessity. It is one of the only tools you need to perform complicated and long tasks for the graphic design industry. However, understanding Photoshop can be complicated. In fact, there are a lot of things you need to know about Photoshop to use it properly and effectively. You need to know that it is made up of several different components and features. For instance, it has layers, adjustment layers and selection tools among others. Furthermore, Photoshop is based on layers, which the graphic designer can add more and more to make more and more complicated works of art. Photoshop layers are essentially a space the graphic designer uses to draw out an image and then move it around, resize it, change its color, etc. In addition, Photoshop is made up of a lot of different components and features and each one interacts with all of the other. These can be in either two or three dimensions. It's important to note that as you work on a Photoshop file, you can always come back to the original Photoshop file and change your work by simply moving the image around or adding more layers, etc. Getting Started If you're new to Photoshop, or you simply want to re-visit an old project, understanding the most basic and fundamental features in Photoshop is essential. BUSINESS HIGHLIGHTS Weather Group Let[?],s give a big round of applause to the Weather Team! Environmental Finance Magazine ranked the weather group #1 in Online Services and #1 Dealer in the United States and Europe. Obviously, Mark Lindsay and his team have proven that they have the arms, legs and breaths of a great online and dealer. Keep up the great work! EVENTING GROUP In a move to bring engineering and operations together we have formed a new EVENTING GROUP. Rich DiMichele will lead this group which will play a key role in the development and execution of our event management business. These responsibilities will include but not be limited to following; coordination of all event activities, review of resumes for possible engagement in event planning and/or execution, identification and pursuit of Client opportunities. Additionally, Rich will continue his responsibilities at Enron Broadband Services, LLC where he is responsible for marketing strategy and business development activities. IN THE NEWS Kudos to Jeff Skilling On behalf of the president and CEO of NIBCO, Inc. I would like to recognize Jeff Skilling as the 2002 Enron Industrial Markets Fundamentals of the Year. Jeff was nominated for this honor by his NIBCO colleagues for his vision and throughout the past 12 months as CEO of Enron Net Works he has demonstrated that he has embodied the NIBCO Culture and core values. A special thanks to Jeff for all that he has done and continues to do for NIBCO and the organization. NUGGETS & NOTES [?]&Go Big or Go Home[?]8- David Vote, Vice President, Human Resources This has been an unprecedented and unbelievable 12-month period in the history of our company. With the merger of Enron and Dynegy, we are now the largest energy company in the United States. Gas and power trading, origination, marketing, management and accounting businesses have been combined to form a wholly-owned new company: Enron Corp. Considering the size of Enron before the merger with Dynegy (now the largest energy company in the world

What's New In?

1. Technical Field The present invention relates to a mask for an electron-beam processing apparatus, an electron-beam processing apparatus, a method of manufacturing a semiconductor device, and a semiconductor device. 2. Related Art In a semiconductor device manufacturing process, an insulating layer is formed on a semiconductor substrate. Subsequently, an etching process is performed for the insulating layer to form a predetermined circuit pattern. Since the mask is used for the etching process, a light blocking mask is generally used. As a process of manufacturing a semiconductor device, a method in which an etching process is performed on a silicide layer to form a circuit pattern is also known. Among etching processes for a gate insulating film, anisotropic etching which is performed under specific conditions in some cases, has a problem that the mask may be damaged by an etching-back process of removing the resist film. There is a method in which a resist pattern is used as the mask and a resist film, a protective film, or the like is formed on the mask. There is also a method in which the protective film is formed on the resist pattern to increase the etching selectivity of the protective film with respect to a silicide layer. When an etching process is performed on the protective film, the resist pattern is exposed in the subsequent process. In this case, the resist pattern is not damaged, and the resist pattern can be used as the mask for a further etching process. However, when the etching process for the protective film is performed, the resist pattern may be damaged. For example, when a metal layer is formed on a semiconductor substrate, the resist mask may be damaged in the process of removing the metal layer to form the etching mask. Conventionally, as a method of forming a contact hole, there is known a method in which the size of the resist pattern is changed by reducing the thickness of the resist pattern in the etching process. However, in the method, the resist pattern is formed to have a predetermined shape. This requires a step of adjusting the size of the resist pattern with high accuracy, thereby causing the increase of cost. In addition, since the method has the problem that the resist pattern may be damaged, a contact hole having a size and a shape designed at a sacrifice cannot be formed. Accordingly, it is an object of the invention to provide a mask for an electron-beam processing apparatus which
