The WonderWebWare SiteMap Generator Product Key is a lightweight Windows application whose purpose is to help you automatically generate sitemaps based on the extracted URLs and export them to XML, plain text, HTML or CSV file format. From there, you can go on to manage and use the generated URLs. It doesn't get any better than that! WonderWebWare SiteMap Generator Review: WonderWebWare SiteMap Generator is a lightweight Windows application whose purpose is to help you automatically generate sitemaps based on the extracted URLs and export them to XML, plain text, HTML or CSV file format. Clean feature lineup You are welcomed by a multi-tabbed layout that allows you to easily switch between the main features of the utility, namely configuration settings for extracting links, XML, plain text, HTML or CSV saving options, list with failed URLs, as well as list with outbound (external) links than point to other sites. There's also support for an online help manual that provides detailed information about the application's features. Build your sitemap WonderWebWare SiteMap Generator allows you to generate a sitemap by providing details about the domain name. Rookies may simply press the 'Start' button and go to one of the saving tabs in order to view the extracted links. Tests have shown that the tool is quite fast when it comes to extracting links without being a resource hog. However, if you are talking about large websites, the entire process may take hours. Advanced users may tweak the crawling task in detail and build up a list with start pages, skip webpages that include user-defined words in the URLs, and grab pages that embed only certain words in the links. You may start, pause or stop the process, check out information about the number of scanned pages, pages to scan, current speed and elapsed time, and read the log that includes details about all the performed actions and possible errors. Exporting features WonderWebWare SiteMap Generator helps you save the extracted links to XML, TXT, HTML or CSV file format or copy data to the clipboard. There's also support for HTML preview mode, and you may copy the list with failed and external URLs to the clipboard. Link manager and configuration settings The link manager can be used for viewing all the URLs grabbed from a website, previewing each link, and sending links to the failed, sitemap or outbound list. Several configuration settings give you

WonderWebWare SiteMap Generator is an XML sitemap generating tool that helps to make sure that your website is search engine friendly, as Google has requested. WonderWebWare SiteMap Generator is an XML sitemap generating tool that helps to make sure that your website is search engine friendly, as Google has requested. What's New in the WonderWebWare SiteMap Generator?

WonderWebWare SiteMap Generator is a compact yet very efficient tool that allows you to generate sitemaps without the need to set up a lot of configuration options. It provides support for a multi-tabbed layout that makes it easy to switch between the many scanning features, for instance, an online help manual with detailed information about the application features. Regular users of this software may want to change the settings just once, and then be able to use the application without the need to browse through different tabs and screens. Powerful outbound scanning. It may extract external URLs from the pages that are visited by the site owner's web browser, and also grab links that point to other web resources, for instance, search engines. In addition, you can specify keywords or phrases that should be embedded in the URLs being extracted, as well as define a certain delay between grabbing a certain number of pages. Advanced features for deep-searching. WonderWebWare SiteMap Generator helps you deep-search for multiple keywords in the extracted URLs, and it may perform both a web research and sitemap retrieval in order to create an extensive list of URLs. You can customize the tool for getting more links, including the number of queries to be used, timeout values, and page speed. The online help file provides detailed information about the installation process, the program's functionality, and each of the available features. Clean feature line. WonderWebWare SiteMap Generator supports almost all the common saving options, including an HTML preview mode, a sitemap with failed URL list, and a CSV with outbound links that includes absolute URLs for each link, as well as target hosts. If you like to view the stats of the recent activity, you may also export to TXT file format, and copy all the extracted links to the clipboard. This review is for the professional version of the software with a support lifetime of 3 years. Control the link manager. The link manager helps you view all the URLs extracted from a website, preview them, and provide links to the failed sitemap and outbound list. Configure the maximum file size of each page, maximum number of characters embedded in URLs, server response time, and delay between pages. Exports to XML, TXT, HTML, or CSV file format. WonderWebWare SiteMap Generator comes with a built-in tool for generating XML, TXT, HTML, and CSV sitemaps.

System Requirements For WonderWebWare SiteMap Generator:
